

I writing this because Satellite Radio is a wonderful communications service and I've been using it since it's inception several years ago. The programming is diverse, interesting, informative. Traffic and Weather is important especially when you're travelling. To try to stop it is ridiculous. My opinion - corporate radio had "dug their own grave" by lack of diversity in programming, no variety especially in the cities, the DO NOT SERVE THEIR COMMUNITY!! Large Cooperations are taking over - all for the money not at all for the benefit of it's listeners. Commercial Radio has created this situation over the years and if there is good competition such as Satellite Radio which the public can enjoy - why stop offering more information such as traffic and weather. WILL COMMERCIAL RADIO EVER STOP!!!!!!?? It's not all about money!! It's about serving the community and providing a wide variety of programming something which Commercial Radio does not do at all!!

Have you listened to the New York Area Radio Dial??? Pathetic!!!
